

Security Policy

ASPF will take all reasonable steps to ensure the security of our web site.
That means:

Keeping Records:

A duplicate of all records of transactions will be kept off line at the time of first transaction. A day account statement of the transactions (incoming and outgoing) will also be stored separately.

Secure Credit Card Transactions:

All credit card transactions will be made on an encrypted HTTPS server using the Secure Sockets Layer (SSL) transport mechanism at a 128 bit level.

Review Limits:

Review limits are limits set up by ASPF, which are designed to prevent fraud, by contacting you the cardholder if there are any suspicious or high risk transactions. These limits will be based on single transactions and individual cardholder limits.

Single transaction review limits:

ASPF will contact you if you donate over two hundred Australian dollars per transaction.

Individual cardholder review limits:

ASPF will contact you if more than three transactions occur within one working week.

ASPF will contact you if you have donated over five hundred Australian dollars.
